

Art.-No.:6.8000.1000

8000

1-Step Compound

Characteristics

High performance compound for automotive clearcoats. Eliminates sanding marks of P2000 and traces of use. Provides a perfect finish in just one step. Silicone-free.

Tech Tip

Quick elimination of sanding marks and high gloss -> Time saving one step process.
Compound does not burn in during high intensity polishing -> Easy to clean and applicable on large surfaces.

Suitable for all types of coating -> Low risk of error.

Application

1. Shake well before applying on a clean and properly cured surface. Avoid using in direct sunlight or on hot surfaces.
2. Use a hard/medium foam polishing pad. Apply a 6" line of polish over the surface with the pad to prevent slinging.
3. Polish at 1500-2000 rpm working slowly across a 2' x 2' section with medium pressure, overlapping each pass. Once the defects have been removed, reduce the pressure and continue polishing to a high gloss.
4. Clean the surface with a soft cloth immediately after polishing.

Technical Data

Colour	white
Viscosity	5-15 Pas
Density	1,15 kg/l
Volume	1 litre

Storage and Transportation

At storage temperatures of preferably 15 to 25°C original packings may be stored for 24 months. Keep from freezing!
